GitHub | LinkedIn | LeetCode

Computer Science undergraduate student with strong foundations in data structures, algorithms, and general-purpose programming (C++, Python, JavaScript/TypeScript), and hands-on experience building full-stack, API-driven business applications. Shipped production-grade REST API backends (FastAPI, Node.js) and React front-ends that automate real-world workflows, integrate third-party services, and translate operational requirements into scalable technical solutions. Actively strengthens systems and algorithmic problem-solving through competitive programming (LeetCode, CodeChef).

TECHNICAL SKILLS

Programming Languages: C++, Python, JavaScript, TypeScript, SQL
Backend & API Development: FastAPI, Node.js, RESTful API design, Web Services integration
Frontend: React, Vite, Tailwind CSS, HTML, CSS, Framer Motion
Databases: SQL, SQLite, MongoDB
Systems & Auth: OTP-based authentication, multi-factor risk scoring, business-process automation
AI/ML: XGBoost, Isotonic Regression, Gemini API
Tools & Workflow: Git, GitHub, Vercel, GitHub Pages, Agile/cross-functional collaboration

PROJECTS

Monsoon Event Forecasting & Agricultural Advisory System | Live Demo | GitHub
Python · XGBoost · FastAPI (REST API) · React · Tailwind CSS · Isotonic Regression

- Engineered a 12-model forecasting system integrating 30 meteorological and ocean-atmosphere data features across chronological train/validation/test splits, achieving 0.969 calibrated ROC-AUC and 0.930 F1-score on held-out 2025 data.
- Reduced probability miscalibration under severe class imbalance by applying isotonic regression calibration, lowering Brier scores across all production models.
- Built a FastAPI backend integrated with a React dashboard to serve a 5-tier decision engine, automating real-time crop advisory delivery to end users via REST API.

SecurePlay — AI-Powered Parental Purchase Protection Platform | GitHub
React · TypeScript · Vite · Tailwind CSS · Gemini API · FaceAPI.js · OTP Authentication

- Built an OTP-based authentication and approval workflow that automatically blocks unauthorized high-risk purchases by minors, routing every flagged transaction through an auditable parent-approval trail.
- Implemented a multi-factor risk-scoring engine that automates purchase-risk classification across every transaction based on estimated age, spend amount, frequency, and time-based behavior.
- Designed an analytics dashboard powered by the Gemini API, giving stakeholders real-time visibility into protected transaction value, approval/block rates, and spending trends.

EDUCATION

ABES Institute of Technology, Ghaziabad 2024 – 2028
Bachelor of Technology, Computer Science and Technology — CGPA: 8.2 / 10

ACHIEVEMENTS

- Solved 350+ algorithmic problems on LeetCode, ranking in the top 34% globally in LeetCode contests.
- Solved 1,000+ problems on CodeChef, earning a 2★ rating through structured competitive programming and algorithms practice.
- Solved 100+ data structures and algorithms problems on GeeksforGeeks.
